

FYSIQ-SPAS

Each tablet contains Drotaverine Hydrochloride 80 mg and Aceclofenac 100 mg

Dosage Form and Strength

Dosage Form: Tablets.

Dosage Strength: Drotaverine Hydrochloride 80 mg and Aceclofenac 100 mg per tablet.

Description:

Fysiq- Spas Tablet is a combination medicine that consists of Aceclofenac and Drotaverine. It is mainly used in the treatment of muscular pain associated with spasms in adults. It can also be used to treat dysmenorrhoea (pain associated with period cramps).

Fysiq- Spas Tablet can provide relief from pain and swelling that occurs due to muscle cramps and spasms. Fysiq- Spas Tablet works by blocking certain enzyme receptors that cause muscle spasms and preventing the release of substances called prostaglandins in the brain that cause pain and fever.

Indication:

- **Abdominal pain:** It is used to treat abdominal pain caused by smooth muscle spasms in the gastrointestinal tract, such as irritable bowel syndrome (IBS).
- **Menstrual pain:** It is used to relieve pain and cramping associated with menstruation.
- **Inflammatory conditions:** It is used to treat pain and inflammation associated with conditions such as osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis.

Mode of Action:

This medicine is a combination of two medicines: Drotaverine and Aceclofenac, which relieves abdominal pain and cramps. Drotaverine is an anti-spasmodic medicine which relieves contractions (spasms) associated with smooth muscles in the abdomen. Aceclofenac is a non-steroidal anti-inflammatory drug (NSAID).

It works by blocking the release of certain chemical messengers that cause abdominal pain and inflammation (swelling).

Dosage:

1 Tablet BID for 3 days.
